

MES

Industry manufacturing
execution system

What is a MES software?

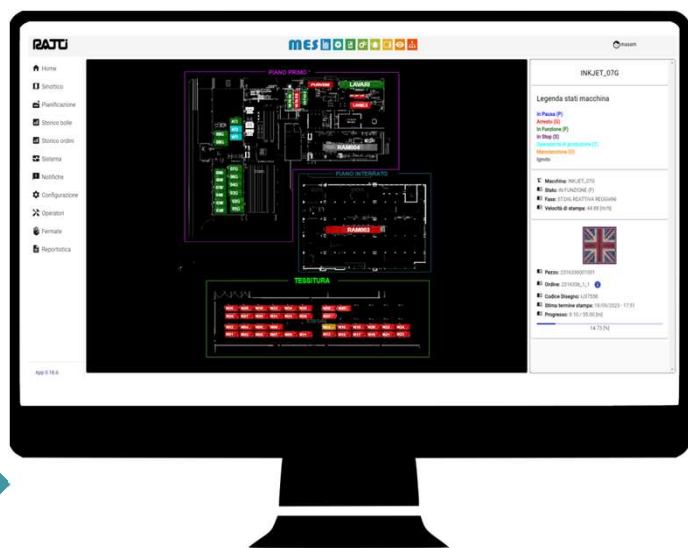

A Manufacturing Execution System (MES) software is a computer-based system used in manufacturing industries to monitor, control, and optimize production processes on the shop floor.

Main functions:

- Process Monitoring
- Production Scheduling
- Quality Control
- Traceability
- Performance analysis
- Systems Integration

One system, many interfaces

Web client

Mobile field device

Touch screen field device

What does MES do?

Production
scheduling

Process
control
